PROFESSIONAL SUMMARY

Detail-oriented Web Developer and Manual Quality Assurance (QA) Tester with extensive experience building custom business applications, responsive corporate platforms, and operational dashboards. Specialized in utilizing PHP, MySQL, JavaScript, and Tailwind CSS to engineer stable frontend architectures and robust relational databases. Adept at navigating complex localized systems (such as CBC curriculum logic and regional payment workflows) while simultaneously auditing system failure paths, verifying user flows, and conducting strict regression and integration testing. Proven track record in data annotation, RLHF training, and software UI screenshot analysis

TECHNICAL SKILLS

- Core Development: PHP, JavaScript (ES6+), HTML5, CSS3, WordPress
- UI/UX & Styling: Tailwind CSS, Bootstrap, Flexbox/Grid Layouts, Figma, Adobe Photoshop
- Database Management: MySQL, Relational Schema Design, Query Optimization
- Quality Assurance & AI Operations: Manual Testing, Regression Testing, Integration Verification, UI/UX Bug Analysis, Data Annotation, RLHF, Function-Calling Assessment
- Tools & Workflow: Git, GitHub, Version Control, Third-Party API Integration (WhatsApp Routing, Google Maps)

PROFESSIONAL EXPERIENCE

TECHNICAL DATA SOLUTIONS CONTRACTOR | iMerit Technology

April 2026 – Present

- Engaged in specialized AI training operations, focusing on Reinforcement Learning from Human Feedback (RLHF) and function-calling assessment.
- Analyze software UI architectures and system screenshots to evaluate machine learning model accuracy and linguistic execution parameters.
- Deliver highly accurate data annotations adhering strictly to rigid technical compliance metrics and operational standards.

WEB DEVELOPER & QA TESTER | Freelance / Remote

March 2024 – Present

- Design, build, and deploy custom single-page and multi-tier web applications for diverse industry sectors, including real estate, hospitality, education, and healthcare.
- Formulate and execute manual test cases across deployment environments to identify visual regressions, broken routing pathways, and edge-case validation errors.
- Build fluid, responsive, accessible web interfaces utilizing Tailwind CSS and native CSS Grid systems, cutting page rendering lag across mobile viewports.
- Integrate business-critical communication pipelines, such as programmatic URL mutation scripts that translate client interface choices directly into structured WhatsApp transaction strings.

FEATURED PRODUCTION PROJECT ARCHITECTURE

(Full source files and live production instances available via portfolio link)

- **Pearls & Psalms Hospital Portal:** Engineered a high-availability healthcare services architecture supporting secure system routing configurations, clinic scheduling endpoints, and clean, client-facing informational resource layouts.
- **Brickhouse Restaurant & Conference Center Build:** Developed a corporate hospitality deployment featuring automated resource booking workflows, real-time venue availability states, and custom layout configuration modules.
- **Insign Link Global Connect Interface:** Designed a streamlined international academic consultancy portal featuring highly optimized user-onboarding funnel logic and interactive document-tracking layouts.
- **Custom School Management System & CBE Dashboard:** Built an administrative dashboard featuring modular teacher profile tracking, finance allocation modules, and dedicated continuous assessment structures aligned with Kenyan CBE curriculum data protocols.
- **Prime Properties Listing & Filter Engine:** Programmed interactive real estate listing logic handling client-side multi-variable filter matrices (pricing arrays and geographic sorting profiles) via native JavaScript state tracking.
- **Sparkling Cleaning Agency Platform:** Constructed a service automation funnel managing dynamic client intake workloads with deep asynchronous form validation mapping to eliminate database pollution.

PROFESSIONAL DEVELOPMENT

- **Assessments & Verifications:** Core Software UI Interpretation and Advanced Function-Calling Evaluation Metrics (Turing / micro1 / Invisible Technologies Frameworks).
- **Linguistic Domain Expertise:** Native fluency in English and Swahili with a strong grasp of localized dialect shifts and code-switching patterns (critical for regional UI customization and speech/text localization tracking).
